

Periodic Verification System Kit

Product Images

Description

The Statico Periodic Verification System Kit is a hand-held alternative to a charged plate monitor. The Periodic Verification System Kit consists of an electrostatic field meter, detachable plate and charger, conductive, impact-resistant case and flexible ground cord

- Used for measuring static charge and verifying ionizer performance
- Ranging lights ensure correct and repeatable measurements by allowing users to determine the exact distance at which the voltage reading is accurate
- Sample and Hold function allows measurements in places that are difficult to reach with other instruments
